Passage 1 - Artificial Intelligence in Healthcare

Artificial intelligence is rapidly transforming the healthcare industry, offering unprecedented opportunities for early diagnosis, personalized treatment, and operational efficiency. Machine learning algorithms can now analyze medical images with accuracy that rivals, and in some cases surpasses, that of experienced radiologists. AI-powered tools are being deployed to predict patient deterioration in intensive care units, enabling timely interventions that save lives. Furthermore, natural language processing is streamlining clinical documentation, freeing physicians to spend more time with patients. However, the integration of AI into medicine raises significant ethical concerns. Issues of data privacy, algorithmic bias, and the potential displacement of healthcare workers must be addressed thoughtfully. Regulatory frameworks are still catching up with the pace of technological advancement, and the lack of transparency in many AI models — often called the 'black box' problem — makes it difficult for clinicians to trust and validate AI-generated recommendations. Striking the right balance between innovation and patient safety remains a formidable challenge.

Q1. [Easy]

What is the primary purpose of the passage?

- A) To argue that AI should replace doctors entirely
- B) To discuss the benefits and challenges of AI in healthcare
- C) To explain how machine learning algorithms work
- D) To criticize the healthcare industry for slow adoption of AI

Answer: B) To discuss the benefits and challenges of AI in healthcare

Explanation: The passage presents both the advantages (early diagnosis, efficiency) and challenges (ethics, bias, regulation) of AI in healthcare.

Q2. [Easy]

- A) The high cost of AI systems in hospitals
- B) The lack of transparency in how AI models arrive at their conclusions
- C) The physical appearance of AI hardware
- D) The difficulty of transporting AI equipment

Answer: B) The lack of transparency in how AI models arrive at their conclusions

Explanation: The passage explicitly states that the 'black box' problem refers to the lack of transparency in many AI models, making it difficult for clinicians to trust AI recommendations.

Q3. [Medium]

Which of the following is NOT mentioned as a benefit of AI in healthcare?

- A) Personalized treatment plans
- B) Reduced cost of medical insurance
- C) Early diagnosis of diseases
- D) Streamlining clinical documentation

Answer: B) Reduced cost of medical insurance

Explanation: The passage mentions early diagnosis, personalized treatment, operational efficiency, and streamlined documentation but does not mention reduced insurance costs.

Q4. [Medium]

The tone of the passage can best be described as:

- A) Overwhelmingly optimistic

Passage 2 - Ocean Plastic Pollution

The world's oceans are drowning in plastic. Every year, approximately eight million metric tons of plastic waste enter marine environments, endangering ecosystems and threatening human health. Microplastics — tiny fragments less than five millimeters in diameter — have been found in the deepest ocean trenches and even in Arctic sea ice. Marine animals, from plankton to whales, ingest these particles, leading to internal injuries, starvation, and death. The problem extends to humans through the seafood supply chain, as microplastics accumulate in the tissues of fish and shellfish. International efforts to combat plastic pollution have gained momentum. Several nations have banned single-use plastics, and innovative cleanup technologies, such as ocean barriers and autonomous collection vessels, are being tested. Yet experts warn that cleanup alone is insufficient. Without addressing the root cause — the overproduction and overconsumption of disposable plastics — the problem will continue to escalate. A circular economy model, where materials are reused and recycled rather than discarded, offers the most sustainable long-term solution.

Q6. [Easy]

According to the passage, how much plastic enters the oceans annually?

- A) Five million metric tons
- B) Eight million metric tons
- C) Ten million metric tons
- D) Twelve million metric tons

- B) To emphasize the pervasive and far-reaching nature of plastic pollution
- C) To argue that the Arctic needs special protection
- D) To demonstrate that microplastics are harmless in cold environments

Answer: B) To emphasize the pervasive and far-reaching nature of plastic pollution

Explanation: By mentioning the deepest ocean trenches and Arctic ice, the author illustrates that plastic contamination has reached even the most remote corners of the planet.

Q10. [Medium]

Which of the following can be inferred from the passage?

- A) Ocean cleanup technologies have successfully eliminated most plastic waste
- B) Humans are immune to the effects of microplastic contamination
- C) Reducing plastic production is more important than cleanup efforts alone
- D) All nations have agreed to ban single-use plastics

Answer: C) Reducing plastic production is more important than cleanup efforts alone

Explanation: The passage states that 'cleanup alone is insufficient' and that addressing overproduction and overconsumption is essential, implying prevention outweighs remediation.

Passage 3 - The Gig Economy

The gig economy has fundamentally altered the landscape of employment worldwide. Platforms like Uber, Freelancer, and TaskRabbit have enabled millions of workers to earn income on their own terms, choosing when, where, and how much they work. For many, this flexibility is liberating, offering an escape from rigid corporate structures and long commutes. Young professionals, in particular, are drawn to gig work as it allows them to pursue diverse projects and develop a broad skill set. However, the gig economy has a darker side that is often overlooked. Gig workers typically lack access to benefits that traditional employees take for granted: health insurance, retirement plans, paid leave, and job security. The absence of a minimum wage guarantee means that many gig workers earn below the poverty line after accounting for expenses. Critics argue that companies profit enormously from this model while shifting financial risk onto individual workers. Governments around the world are now grappling with how to regulate this sector, attempting to protect worker rights without stifling the innovation that makes gig platforms attractive.

Q11. [Easy]

What is the author's attitude toward the gig economy?

- B) Entirely negative
- C) Nuanced, acknowledging both advantages and drawbacks
- D) Dismissive and uninterested

- B) Companies avoid bearing costs and liabilities that workers must absorb
- C) Workers receive higher pay to compensate for risks
- D) Companies share profits equally with workers

Answer: B) Companies avoid bearing costs and liabilities that workers must absorb

Passage 4 - CRISPR Gene Editing

CRISPR-Cas9, a revolutionary gene-editing technology, has opened new frontiers in biology and medicine. Originally discovered as a bacterial defense mechanism against viruses, CRISPR allows scientists to precisely cut and modify DNA sequences with remarkable accuracy and efficiency. This technology holds immense promise for treating genetic disorders such as sickle cell disease, cystic fibrosis, and certain forms of cancer. Clinical trials are already underway, and early results have been encouraging. Beyond medicine, CRISPR has applications in agriculture, where it can create crop varieties that are more resistant to drought, pests, and disease, potentially addressing food security challenges in developing nations. However, the power of CRISPR also raises profound ethical questions. The possibility of editing human embryos to create so-called 'designer babies' has alarmed ethicists and policymakers alike. In 2018, a Chinese scientist controversially claimed to have created the first gene-edited babies, an act widely condemned by the scientific community. The incident underscored the urgent need for international guidelines governing the use of this powerful technology.

Q16. [Easy]

- B) By creating crop varieties resistant to drought, pests, and disease
- C) By replacing all natural crops with synthetic food
- D) By eliminating the need for agriculture altogether

Answer: B) By creating crop varieties resistant to drought, pests, and disease

Explanation: The passage mentions CRISPR can 'create crop varieties that are more resistant to drought, pests, and disease.'

Passage 5 - The Psychology of Decision-Making

Human decision-making is far less rational than most people assume. Decades of research in behavioral psychology and economics have revealed that our choices are heavily influenced by cognitive biases — systematic patterns of deviation from rationality. One of the most well-documented biases is the anchoring effect, where people rely too heavily on the first piece of information they encounter when making decisions. For example, a shopper who sees a shirt originally priced at five thousand rupees marked down to two thousand perceives it as a bargain, even if the shirt is objectively worth only one thousand. Similarly, the availability heuristic causes people to overestimate the likelihood of events that are easily recalled, such as plane crashes, while underestimating more common risks like heart disease. Confirmation bias — the tendency to seek information that supports one's pre-existing beliefs while ignoring contradictory evidence — is perhaps the most pervasive of all. Understanding these biases is crucial not only for individuals seeking to make better decisions but also for organizations designing policies, marketing strategies, and user interfaces that account for predictable human irrationality.

Q21. [Easy]

What is the main argument of the passage?

- A) Humans are perfectly rational decision-makers
- B) Cognitive biases systematically distort human decision-making
- C) Marketing strategies are always unethical
- D) Plane crashes are more common than heart disease

Answer: B) Cognitive biases systematically distort human decision-making

Explanation: The passage's central theme is that human decision-making is influenced by systematic cognitive biases that deviate from rationality.

The example of the marked-down shirt illustrates which cognitive bias?

- A) Confirmation bias
- B) Availability heuristic
- C) Anchoring effect
- D) Hindsight bias

Answer: C) Anchoring effect

Q23. [Medium]

According to the passage, why do people overestimate the likelihood of plane crashes?

- A) Because plane crashes are actually very common
- B) Because of the anchoring effect
- C) Because plane crash reports are easily recalled due to media coverage
- D) Because of confirmation bias

Answer: C) Because plane crash reports are easily recalled due to media coverage
